

PRESCOM & The French Ministry of the Interior

PRESCOM, member of the TETRAPOL Forum, has been retained for the study of communication systems dedicated to the Control rooms of the French National Police.

The French Ministry of the Interior retained PRESCOM, member of the TETRAPOL Forum, for the study of communication systems dedicated to the Control rooms of the French National Police (Centres d'Information et de Commandement - CIC).

These systems include Digital Switches and Operator terminals. Switches provide radio and telephone interoperability. They dispatch traffic on the operator terminals of the Control room. These terminals allow Dispatchers to manage and coordinate the telecommunication means implemented by the French Ministry of the Interior.

The solution recommended by PRESCOM relies on a patented distributed architecture which offers a high rate of availability.

The Switch interconnects to telephone and analog and digital radio Networks, notably to the ACROPOL Network. ACROPOL is the TETRAPOL digital radio Network of the French Ministry of the Interior.

Operator terminals go from mono-channel to computer aided multi-channel positions including functions such as multiple monitoring, multimedia conferencing, calling party identification (...)

European leader on the Teleconferencing market, PRESCOM installs its audio and videoconferencing servers all over the world.
